

COMPANY NURSE

We offer “Company Nurse” as a triage program to make sure that appropriate care is administered at the right time, resulting in the right outcome.

A number of clinical studies conclude that day-of-injury response is critical.

Our Solution

Company Nurse is centered around a dedicated “on-call” nursing professional who responds on the day of injury. The triage nurse refers employees to the appropriate level of care: on-site first aid as advised by the nurse, a referral to a panel physician, or an emergency room visit.

The Benefit to You

Company Nurse eliminates any paperwork at the time of injury by the employee, supervisors or HR/Risk Management by automating the process through the nurse. It also negates the need for supervisors to make medical treatment decisions for employees and appropriately places that responsibility in the hands of an experienced and capable triage nurse.

Medical claim costs can be substantially reduced by redirecting to appropriate care facilities when an emergency room is not necessary, and typically clinical outcome is dramatically improved, which naturally increases employee satisfaction.
